Certificate debisZERT-DPZ-CC-05044

concerning the

Development Process

of

Biodata Information Technology AG

Burg Lichtenfels, D-35104 Lichtenfels, Germany

Biodata Information Technology AG has tasked debis Systemhaus Information Security Services GmbH with the certification of their development process for IT products. Objectives of the certification are the protection of development data (and other confidential company data), the availability of development tools and required IT infrastructure, as well as the principle suitability of the developed products for evaluation against the Common Criteria.

The assessment of the security measures for the development process, as described below, could not identify any weakness in either the documentation or the implementation:

a) The entire documentation supplied was evaluated for internal and external consistency. The Security Target for the development process was evaluated for conformity to the Common Criteria (ISO/IEC 15408); the Security Target contains all definitions for security objectives, security requirements and security measures as well as the corresponding analysis and rationale.

b) The implemented security measures for organisation, personelle, infrastructure and IT were audited on location to confirm their effectiveness and correct implementation with respect to the documentation.

The assessment was performed based on internal guidelines of debis Systemhaus Information Security Services GmbH and by using the methodology of the Common Criteria. The initial audit took place on December 4, 2000 at the Burg Lichtenfels facilities and on December 15, 2000 at the Nürnberg facilities. Further periodical audits were agreed on. This certificate is valid until December 31, 2001.

Bonn: December 20, 2000
